To whom it may concern

I have just completed my final semester in Software engineering from Nepal college of Information and technology . During my college time I have done my college projects in Java, Python.

In Java, I have developed a application to store contact details through online. In python I have used it's Django Framework to develop web application Called tour and travels management system in which different trekking enthusiasts can search trekking spot in Nepal and can find a suitable trekking guide . I have also developed simple web applications in Django. I have also developed different Projects in Python using different libraries like Tkinter, Opencv.

As you have already known that I have completed engineering course through NCIT college . I was unable to experience moderate knowledge during my college time and I am pretty sure that I will be able to work and learn in your company very easily and efficiently . I am also sure that being an intern to your company I would never let you down . I will be pretty sure that your company would be profited while working as an intern, and I am also very sure that I will also be benefited because I get to know many practical knowledge .

Reviewing my form and CV I hope you will consider letting me give an intern in your amazing company . Hoping to hear from you soon .

Thankyou
